BUSINESS

Paper 1 Short Answer and Essay MARK SCHEME Maximum Mark: 40 9609/13 May/June 2021

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE[™], Cambridge International A and AS Level components and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Social Science-Specific Marking Principles (for point-based marking)

1	Co •	mponents using point-based marking: Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.				
	Fro	om this it follows that we:				
	a b	DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term) DO credit alternative answers/examples which are not written in the mark scheme if they				
	c	are correct DO credit answers where candidates give more than one correct answer in one				
	d	prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require <i>n</i> reasons (e.g. State two reasons). DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)				
	е	DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities				
	f	DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).				
	g	DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)				
2	Pre	esentation of mark scheme:				
	•	Slashes (/) or the word 'or' separate alternative ways of making the same point. Semi colons (;) bullet points (•) or figures in brackets (1) separate different points. Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).				
3	Са	Iculation questions:				
	•	The mark scheme will show the steps in the most likely correct method(s), the mark for				
	•	each step, the correct answer(s) and the mark for each answer If working/explanation is considered essential for full credit, this will be indicated in the				
		question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.				
	٠	Where the candidate uses a valid method which is not covered by the mark scheme,				
	•	award equivalent marks for reaching equivalent stages. Where an answer makes use of a candidate's own incorrect figure from previous working,				
	2	the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.				

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

9609 Paper 1 Specific Marking Principles

Marks are awarded for each answer when the following Assessment Objectives (AO) are met. The mark scheme for each answer indicates when and how each AO can be met.

AO1 – Demonstrate knowledge and understanding of business concepts.

The focus in <u>Section A</u> of the Examination Paper is on this first AO.

- (a) Questions 1, 2, and 4 will meet this AO using definitions and explanations of business concepts.
- (b) Question 3 provides an opportunity for the application and a more developed explanation of a business concept. The 4–5 mark level specifically provides for this more developed explanation.

In <u>Section B</u> of the Examination Paper.

(a) Questions 5, 6, and 7 still require supporting Knowledge and Understanding (AO1), but there is now a focus on **Application (AO2)**, **Analysis (AO3)**, and **Evaluation (AO4)**. These skills are set out below:

AO2 – Apply knowledge and understanding of business concepts to general and specific situations and contexts.

- (a) Where a specific business or context is named in the question then the candidate is required to relate answers specifically to this business or context.
- (b) It is not sufficient to merely repeat the name of the business or the context.

AO3 – Analyse business problems, issues, situations and contexts, through a discussion and interpretation of evidence, debate, theory, impact and consequence, to produce reasoned and coherent arguments.

(a) Level 3 answers will likely use terms such as – because, leads to, therefore, so that, as a result, consequently – thereby showing analytical development for AO3.

AO4 – Limited Evaluation is given

- (a) When an attempt is made, (probably in a concluding section of an answer), to address and comment on the value and validity of the previous analysis.
- (b) These comments may be quite brief and be more opinionated than reasoned.
- (c) A mere concluding summary of preceding analysis is, however, <u>not</u> evaluation.

AO4 – Evaluation occurs

- (a) When an answer comments on the validity/significance of previous analysis in an evidence based and reasoned way.
- (b) This often leads to the presentation of appropriate substantiated judgements, decisions, or recommendations.

Question	Answer	Marks
1(a)	 Define the term 'stakeholders'. individual or group with an interest in / relationship to a business. (1) anyone who might be affected by / benefit from the activities / make decisions of a business. (1) e.g. managers, employees, suppliers, lenders, government, 	2
	internal, external. (1) Sound definition 2 of the factors listed above. (2 marks) Partial definition 1 of the factors listed above. (1 mark) No creditable content. (0 marks)	
1(b)	 Explain two responsibilities of a stakeholder group. Answers could include: employees: to work according to their contract of employment; to co-operate with management; be honest and diligent; obey codes of conduct. managers: to make decisions in the best interests of the business; honesty, ethics, social responsibility. employees and managers: protect company information from competitors. customers: to be honest in their dealings with the business e.g. not steal; not to exploit a business by unfair claims; pay for goods on time. suppliers: supply goods/materials of the desired quality; deliver on time; charge a reasonable price. lenders of finance: to supply finance on the terms agreed; to allow repayment in the time agreed. government: intervene on behalf of other stakeholders; pollution, consumer protection, employee interests; support via grants/subsidies. Accept any other valid response. Sound explanation of one responsibilities. (3 marks) Sound explanation of one responsibility or partial explanation of two responsibilities. (1 mark). No creditable content. 	3

Question	Answer	Marks
2(a)	Define the term 'economies of scale'. • reduction in costs of production/operations. (1) • due to increase in size/scale of production / output. (1) • correct diagram showing economies of scale. (2) Sound definition 2 of the factors listed above. (2 marks) Partial definition 1 of the factors listed above. (1 mark) No creditable content. (0 marks)	2
2(b)	 Explain two possible causes of diseconomies of scale. Answers could include: Communication diseconomies: increased output leading to an increase in the workforce, making it more difficult to communicate directly with employees. Less direct methods of communication might need to be used which might be less effective. Feedback from employees/departments is likely to be more difficult to obtain. Co-ordination diseconomies: more people, more departments and possibly more functions within a business make the monitoring and managing of individual performances or processes more difficult to achieve, making co-ordination of activities more difficult. Timing of activities – it might become more difficult to ensure that activities are completed at the same/required time. The values of the business might not be employeed to the same extent in each section of the business e.g. ethical values, environmental values. Control diseconomies: employees can feel more alienated in a larger organisation and the quality standard might fall. More output can make it more difficult to check each item for quality. It is more difficult to control several departments on numerous sites than to monitor and control the functions within a smaller business. Accept any other valid response. Sound explanation of one possible cause of diseconomies of scale. (2 marks) Partial explanation of one possible cause of diseconomies of scale or partial explanation of one possible cause of diseconomies of scale or last of two. (1 mark) 	3

Question	Answer	Marks
3(a)	Explain why cost-based pricing might be an effective pricing strategy for a small business.	5
	Answers could include:	
	 Cost-based pricing is determined by the costs of production of a product/service. Cost plus pricing - the full costs of a product are calculated and a margin is added to achieve the desired profit level. Contribution cost pricing – in a small business, it is likely that the fixed costs per product are known due to the small scale of the business, making it easier to include a proportion of them in the price of each item produced. A small business needs to ensure that all the costs of production are covered by the price charged to its customers. The fixed costs together with all variable costs will be included and a percentage added to give a profit. This can ensure that the business recovers all costs when goods are sold. The amount of profit added on to the costs of the business can be adjusted to make sure that the business is able to compete on price 	
	 with its competitors. Accept any other valid response. 	
	Effective explanation of why cost-based pricing might be an effective pricing strategy for a small business. (4–5 marks)	
	Limited explanation of why cost-based pricing might be an effective pricing strategy for a business. (2–3 marks)	
	Explanation of cost-based pricing. (1 mark)	
	No creditable content. (0 marks)	

Question	Answer	Marks
4(a)	Define the term 'labour turnover'. • The rate at which employees leave a business (2) • Correct formula Number of employees leaving (in a year) Number of employees in the business (in a year) ×100 (2) • Employees leaving the business. (1) • In a given time period. (1) • Through dismissal, resignation, redundancy, new employment. (1) Sound definition will be either the first bullet point or the formula or 2 of the other 3 bullet points. (2 marks) Partial definition 1 of bullet points 3, 4 or 5. (1 mark) No creditable content. (0 marks)	2
4(b)	 Explain two ways in which the recruitment and selection process of a business could help to improve labour turnover. Answers could include: be sure that the job description accurately describes the tasks and responsibilities of the job to recruit the most suitable people. be sure that the person specification is focused on the qualities and qualifications required when recruiting staff. Investigate/analyse previous employees' reasons for leaving. use an appropriate medium for advertising any posts e.g. social media, recruitment sites or agencies, local newspapers, depending on the role. check that applicants have the relevant essential and desirable qualities. If not, then reject the application. use an appropriate selection technique or a combination of methods e.g. an aptitude test followed by an interview. It is possible that using only one technique might not give the most reliable results. For example, some people are able to interview well but might not perform as well in an aptitude test. the more thorough/appropriate the recruitment and selection process is, the more likely it is that the best candidate is selected. If the person is right for the job, it is less likely that they will leave, therefore labour turnover will improve. Accept any other valid response. Sound explanation of two ways. (3 marks) Sound explanation of one way or partial explanation of two ways. (1 mark) No creditable content. 	3

Question		Answer		Marks
5(b)		ne benefits to a clothing business of holding buffer n using a Just in Time (JIT) inventory system.	inventory	12
	Level	The Description	Marks	
	4	Effective evaluation of the benefits to a clothing business of holding buffer inventory rather than using a Just in Time (JIT) inventory system.	9–12	
	3	Limited evaluation of the benefits to a business of holding buffer inventory and/or using a Just in Time (JIT) inventory system.	7–8	
	2	Analysis and application of the benefits of holding buffer inventory <u>and/or</u> using a Just in Time (JIT) inventory system.	3–6	
	1	Knowledge and understanding of buffer inventory/JIT inventory system.	1–2	
	0	No creditable content	0	
	Answers co	ould include:		
	• Cl	e and Understanding 2 marks ear understanding of buffer inventory. ear understanding of JIT inventory system.		
	Applicatio ● Re	n 2 marks eference to the use of inventory systems such as buffe	r and JIT.	
	pro de JIT an rei rei op • Wi op • Th ord • Wi to • Us	mark Iffer – the minimum amount of inventory held to ensure oduction can continue uninterrupted if delivery of inven- layed or to ensure that a variation in demand can be m Γ – the management of inventory that ensures that new rives just at the time when it is required and not before. moves the need for inventory to be held in storage unti- quired. hen holding buffer inventory, the business is able to co- perate even if there is a delay in delivery from suppliers the cost of holding the additional inventory might be wor- der to ensure that customer demand can be satisfied. ith JIT, equipment and employees would be idle if inve- arrive on time. Holding buffer inventory avoids that pro- sing buffer inventory also means that larger orders can gain bulk buying benefits.	tory is net. v inventory . It I it is ntinue to thwhile in ntory failed blem.	

Question	Answer	Marks
5(b)	• JIT saves on storage and associated costs but there is always a danger that, if a delivery is delayed, the operation of the business stops and customer demand will not be met. Lost sales and lost reputation can result from a failure to meet orders.	
	Evaluation 6 marks	
	 A candidate should make a judgement on the benefits to a clothing business of holding buffer inventory rather than using a Just in Time (JIT) inventory system. These judgements may be made at any point as well as in a concluding section. The context is a clothing business. The inventory management system used by the business depends on the reliability of suppliers to deliver at the time required and at a reasonable price. 	
	 If the business experiences sudden increases in demand, then the buffer inventory system gives more security to meet that demand. On the other hand clothes will go out of fashion very quickly so buffer stock may be unsold or have to be heavily discounted to get rid of it. 	
	Accept any other valid response.

Question	Answer	Marks
6	 Evaluation 6 marks A candidate may make a judgement as to the extent to which product differentiation is the only way for a business to ensure success in a highly competitive technology industry. These judgements may be made at any point as well as in a concluding part. The context is the highly competitive technology industry. Product differentiation does not always have to be in the physical product itself. The product/business can stand out through other means. The differentiation might be achieved through an effective marketing campaign that makes the customers see this business's product as the 'must have' product. The customer service offered to consumers if they experience a problem can also differentiate one business from another. Poor customer service is often quoted as the reason why customers refuse to deal with a specific business. There are other ways to compete e.g. on price but in the technology market it is likely that the distinctive features offered by a particular product, that the competitors do not have, will make them stand out in the market and enable them to charge a high price. However, it is of no use having outstanding features and functionality if the product is not reliable. The new features need to be tried and tested before being sold to customers.

Question		Answer		Marks
7(b)	Discuss the usefulness of accounting ratios to a business considering entry into new markets.			12
	Level	Description	Marks	
	4	Effective evaluation of the usefulness of accounting ratios to a business considering entry into new markets.	9–12	
	3	Limited evaluation of the usefulness of accounting ratios to a business considering entry into a market.	7–8	
	2	Analysis and application of the usefulness of accounting ratios to a business.	3–6	
	1	Knowledge and understanding of accounting ratios.	1–2	
	0	No creditable content.	0	
	Answers might include: Knowledge and Understanding 2 marks • Clear understanding of accounting ratios Application 2 marks • Reference to the use of accounting ratios • Reference to entry into (new) markets			
	 Analysis 2 marks Accounting ratios are calculated using the Income Statement and/or the Statement of Financial Position. The ratios that can be calculated are liquidity ratios, profitability ratios. The ratios can be used to identify trends over time and to assess whether the financial position of the business is strengthening or weakening in financial terms. The usefulness of accounting ratios can depend on many factors: The accuracy of the financial information How similar a new market is to an existing market The time scale for entry into the new market; a gradual entry can be less risky/cheaper than a rapid one. The type of new market; geographical etc Does the business have sufficient knowledge of the new consumers they are aiming at? Ratios will not tell the business anything about consumers' wants/needs. Analysis of various ratios might highlight areas of the business that need improvement and may improve the chances of successful entry into a new market. 			

Question	Answer	Marks
7(b)	 Evaluation 6 marks A candidate should make a judgement as to the usefulness of accounting ratios to a business considering entry into new markets. These judgements may be made at any point as well as in a concluding section. The context is entry into new markets. Accounting ratios are calculated using historic information. The current situation might be different, even within a short time. They are no guarantee of future success. Accounting ratios are not a substitute for the thorough market research that would be essential to make sure that the new market is suitable for this business. What is judged to be acceptable in one place might not be acceptable e.g. in a different country. The financial strength of the business will need to be able to support the expenditure required to achieve the proposed entry into a new market but without a thorough knowledge of the new market the ratios are of limited help. Qualitative factors might be more important than quantitative ones e.g. there needs to be appropriate management and staff to succeed in new markets. PEST factors should be considered. Accept any other valid response.
