ο	Advanced Practi	cal Skills 1 Oct	tober/November 2011 2 hours			
ン 5 5 5 5 5 5 5 5 5 5 5 5 5	Candidates answer on the Question Paper. Additional Materials: As listed in the Confidential Instructions					
*	READ THESE INSTRUCTIONS FIRST					
	 Write your Centre number, candidate number and name on all the work you hand in. Give details of the practical session and laboratory where appropriate, in the boxes provided. Write in dark blue or black pen. You may use a soft pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid. DO NOT WRITE IN ANY BARCODES. 					
	Answer all quest You may lose m	tions. narks if you do not show your working or if you do not use				

appropriate units.

Use of a Data Booklet is unnecessary.

Qualitative Analysis Notes are printed on pages 8 and 9.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 9 printed pages and 3 blank pages.

1 You are to determine the enthalpy change of neutralisation of hydrochloric acid by aqueous sodium hydroxide and also the concentration of the aqueous sodium hydroxide. These can be found by measuring the temperature change when solutions of the acid and alkali are mixed.

For Examiner's Use

FA 1 is aqueous sodium hydroxide, NaOH. **FA 2** is 2.00 mol dm^{-3} hydrochloric acid, HC*l*.

(a) Method

- Fill a burette with FA 1. [Care: FA 1 is corrosive]
- Support the plastic cup in a 250 cm³ beaker.
- Use a measuring cylinder to transfer 25 cm³ of **FA 2** into a 100 cm³ beaker.
- Use a measuring cylinder to add 35 cm³ of distilled water to the acid in the beaker.
- Measure and record, in the table below, the initial temperature of the mixture in the beaker.
- Run 5.0 cm³ of **FA 1** from the burette into the plastic cup.
- Add the mixture of acid and water from the 100 cm³ beaker to the **FA 1** in the plastic cup.
- Stir carefully and measure the highest temperature obtained.
- Record this temperature in the table.
- Rinse the plastic cup with water.
- Repeat the experiment using 25 cm³ of **FA 2**, 30 cm³ of distilled water and 10.0 cm³ of **FA 1** as shown for experiment **2** in the table.
- Carry out experiments 3 to 7 in the same way.
- Complete the table for each experiment.

Results

experiment number	1	2	3	4	5	6	7
volume of FA 2 / cm^3	25	25	25	25	25	25	25
volume of water / cm ³	35	30	25	20	15	10	5
volume of FA 1 / cm ³	5.0	10.0	15.0	20.0	25.0	30.0	35.0
initial temperature of acid mixture / °C							
highest temperature / °C							
temperature change / °C							

(b) On the grid below plot the temperature **change** (*y*-axis) against the volume of **FA 1** (*x*-axis). Using these points, draw two straight lines that intersect.

For Examiner's Use

[Turn over

3

(c)	Reading from the intersection of the two lines on your graph,	For
	the volume of FA 1 is cm^3 ,	Examiner's Use
	the temperature change is °C. [1]	
	The volume of FA 1 at the intersection represents the volume of FA 1 which neutralised 25.0 cm^3 of FA 2 .	
(d)	The reaction between FA 1 and FA 2 is shown in the equation below.	
	NaOH(aq) + HCl(aq) \rightarrow NaCl(aq) + H ₂ O(I)	
	This reaction is exothermic.	
	Use this information to explain the shape of the graph.	
	[2]	
(e)	Calculate the amount of heat energy produced in the reaction. Use the temperature change from (c) in calculating your answer.	
	[Assume that 4.3 J are required to raise the temperature of 1 cm^3 of any solution by $1 \degree \text{C}$]	
	heat energy produced = J [2]	
(f)	Calculate how many moles of hydrochloric acid are present in 25 cm ³ of FA 2 .	
	mol of hydrochloric acid =[1]	
(g)	Use your answers to (e) and (f) to calculate the enthalpy change of neutralisation of hydrochloric acid by aqueous sodium hydroxide.	
	Give your answer in kJmol ⁻¹ and include the relevant sign.	
	enthalpy change of neutralisation =	
	sign value [2]	

2 Qualitative Analysis

At each stage of any test you are to record details of the following.

- colour changes seen
- the formation of any precipitate
- the solubility of such precipitates in an excess of the reagent added

Where gases are released they should be identified by a test, **described in the appropriate place in your observations**.

You should indicate clearly at what stage in a test a change occurs. Marks are **not** given for chemical equations. **No additional tests for ions present should be attempted.**

If any solution is warmed, a boiling tube MUST be used.

Rinse and reuse test-tubes and boiling tubes where possible.

Where reagents are selected for use in a test, the full name or correct formula of the reagents must be given.

- (a) You are provided with three sodium salts FA 3, FA 4 and FA 5. Each salt contains one of the ions carbonate, CO_3^{2-} , sulfite, SO_3^{2-} or sulfate, SO_4^{2-} .
 - (i) Using your knowledge of the reactions of these ions, suggest **one** reagent you could add to the solid to find out which ion is present in each of the solids.

.....

(ii) Use the reagent you selected in (i) to identify which of these ions is present in FA 3, FA 4 and FA 5.

Carry out suitable tests on a small amount of each solid and record the results of your experiments in an appropriate form in the space below.

Ι	
II	
III	
IV	
V	
VI	

For Examiner's Use

Identify the anions in FA 3, FA 4 and FA 5.

FA 3 contains the ion.

FA 4 contains the ion.

FA 5 contains the ion.

[6]

(b) (i) You are provided with **FA 6** both as a solid and in aqueous solution. Complete the following table.

For Examiner's Use

Ι

Π

[1]

test	observations
To a small spatula measure of FA 4 in a test-tube, add enough distilled water to make a solution.	
Add 1 cm depth of FA 6 solution.	
To a small spatula measure of FA 5 in a test-tube, add enough distilled water to make a solution.	
Add 1 cm depth of FA 6 solution.	
To 1 cm depth of FA 6 solution in a test-tube, add aqueous sodium hydroxide.	
Carefully heat the solid FA 6 in the test-tube provided.	
Note: two gases are released.	
(ii) From the results of the tests in (Cation present in FA 6 is	(i), identify the cation present in FA 6 .

[Total: 15]

reagent

(iii) Suggest and use another reagent to confirm the cation present in FA 6.

Qualitative Analysis Notes

Key: [ppt. = precipitate]

1 Reactions of aqueous cations

	reaction with				
ion	NaOH(aq)	NH ₃ (aq)			
aluminium,white ppt.Al3+(aq)soluble in excess		white ppt. insoluble in excess			
ammonium, NH ₄ +(aq)	no ppt. ammonia produced on heating				
barium, Ba ²⁺ (aq)	no ppt. (if reagents are pure)	no ppt.			
calcium, Ca ²⁺ (aq)	white ppt. with high [Ca ²⁺ (aq)]	no ppt.			
chromium(III), Cr ³⁺ (aq)	grey-green ppt. soluble in excess giving dark green solution	grey-green ppt. insoluble in excess			
copper(II), Cu ²⁺ (aq)	pale blue ppt. insoluble in excess	blue ppt. soluble in excess giving dark blue solution			
iron(II), Fe ²⁺ (aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess			
iron(III), Fe ³⁺ (aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess			
lead(II), Pb ²⁺ (aq)	white ppt. soluble in excess	white ppt. insoluble in excess			
magnesium, Mg ²⁺ (aq)	white ppt. insoluble in excess	white ppt. insoluble in excess			
manganese(II), Mn ²⁺ (aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess			
zinc, Zn ²⁺ (aq)	white ppt. soluble in excess	white ppt. soluble in excess			

[Lead(II) ions can be distinguished from aluminium ions by the insolubility of lead(II) chloride.]

2 Reactions of anions

ion	reaction				
carbonate,	CO ₂ liberated by dilute acids				
CO ₃ ²⁻					
chromate(VI), CrO ₄ ²⁻ (aq)	yellow solution turns orange with H ⁺ (aq); gives yellow ppt. with Ba ²⁺ (aq); gives bright yellow ppt. with Pb ²⁺ (aq)				
chloride,	gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq));				
C <i>l</i> ⁻ (aq)	gives white ppt. with Pb ²⁺ (aq)				
bromide, Br [–] (aq)	gives cream ppt. with Ag ⁺ (aq) (partially soluble in NH ₃ (aq)); gives white ppt. with Pb ²⁺ (aq)				
iodide, I⁻ (aq)	gives yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq)); gives yellow ppt. with Pb ²⁺ (aq)				
nitrate, NO ₃ ⁻ (aq)	NH_3 liberated on heating with $OH^-(aq)$ and Al foil				
nitrite, NO ₂ ⁻ (aq)	NH ₃ liberated on heating with OH ⁻ (aq) and A <i>l</i> foil; NO liberated by dilute acids (colourless NO \rightarrow (pale) brown NO ₂ in air)				
sulfate, SO ₄ ^{2−} (aq)	gives white ppt. with Ba ²⁺ (aq) or with Pb ²⁺ (aq) (insoluble in excess dilute strong acids)				
sulfite,	SO ₂ liberated with dilute acids;				
SO ₃ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids)				

3 Tests for gases

gas	test and test result	
ammonia, NH ₃	turns damp red litmus paper blue	
carbon dioxide, CO ₂	gives a white ppt. with limewater (ppt. dissolves with excess CO ₂)	
chlorine, Cl ₂	bleaches damp litmus paper	
hydrogen, H ₂	"pops" with a lighted splint	
oxygen, O ₂	relights a glowing splint	
sulfur dioxide, SO ₂	turns acidified aqueous potassium dichromate(VI) from orange to green
