

### **Cambridge International Examinations**

Cambridge International Advanced Subsidiary and Advanced Level

CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
CHEMISTRY			9701/35
Paper 3 Advance	ced Practical Skills 1		May/June 2018
			2 hours
Candidates ans	wer on the Question Paper.		

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Give details of the practical session and laboratory where appropriate, in the boxes provided.

As listed in the Confidential Instructions

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Additional Materials:

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

Use of a Data Booklet is unnecessary.

Qualitative Analysis Notes are printed on pages 10 and 11. A copy of the Periodic Table is printed on page 12.

A copy of the Periodic Table is printed on page 12.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of 12 printed pages.

#### **Quantitative Analysis**

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

1 In this experiment you will determine **x** in the formula of hydrated sodium carbonate, Na<sub>2</sub>CO<sub>3</sub>.**x**H<sub>2</sub>O, by titration.

**FA 1** is hydrated sodium carbonate, Na<sub>2</sub>CO<sub>3</sub>.**x**H<sub>2</sub>O. **FA 2** is 0.110 mol dm<sup>-3</sup> hydrochloric acid, HC*l*. methyl orange indicator

#### (a) Method

#### Making a solution of FA 1

- Record all masses in the space below.
- Weigh the container with **FA 1**.
- Tip all the solid **FA 1** into the 250 cm<sup>3</sup> beaker.
- Weigh the container with any residual FA 1.
- Add approximately 100 cm<sup>3</sup> of distilled water to the beaker and stir to dissolve **FA 1**.
- Transfer the solution to the 250 cm³ volumetric flask.
- Rinse the beaker twice, each time with about 20 cm<sup>3</sup> of distilled water, and add this to the volumetric flask.
- Add distilled water to the volumetric flask to make 250 cm<sup>3</sup> of solution and shake thoroughly.
   Label this solution FA 3.
- Calculate and record the mass of **FA 1** used to make this solution.

#### **Titration**

- Pipette 25.0 cm³ of **FA 3** into a conical flask.
- Fill the burette with FA 2.
- Add several drops of methyl orange indicator to the conical flask.
- Carry out a rough titration and record your burette readings in the space below.

The rough titre is ...... cm<sup>3</sup>.

Ι		•	Carry out as many accurate titrations as you think necessary to obtain consistent results.  Make sure any recorded results show the accuracy of your practical work.
II		•	Record, in a suitable form below, all of your burette readings and the volume of <b>FA 2</b> added in each accurate titration.
III			
IV			
V			
VI			
VII			
			[7]
	(b		om your accurate titration results, obtain a suitable value for the volume of <b>FA 2</b> to be used your calculations. Show clearly how you obtained this value.
			25.0 cm <sup>3</sup> of <b>FA 3</b> required cm <sup>3</sup> of <b>FA 2</b> [1]
	1-	٠	laulatiana
	(C	) Ca	Iculations
		(i)	Give your answers to (ii), (iii) and (iv) to the appropriate number of significant figures. [1]
		(ii)	Calculate the number of moles of hydrochloric acid in the volume of <b>FA 2</b> calculated in <b>(b)</b> .
			moles of $HCl = \dots mol [1]$
		(iii)	Complete the equation below and include the missing state symbols.
		Na	${\rm H_2CO_3(aq)}$ + HC $l({\rm aq})$ $\rightarrow$ NaC $l$ + CO $_2$ + H $_2$ O
			Calculate the number of moles of sodium carbonate in 25.0 cm <sup>3</sup> of <b>FA 3</b> .
			moles of $Na_2CO_3$ in 25.0 cm <sup>3</sup> of <b>FA 3</b> = mol [1]

(	(iv)	Calculate the number of moles of sodium carbonate in 250.0 cm <sup>3</sup> of <b>FA 3</b> .
		moles of $Na_2CO_3$ in 250.0 cm <sup>3</sup> of <b>FA 3</b> = mo
		Use this answer and your data on page 2 to calculate the relative formula mass, $M_r$ , or hydrated sodium carbonate, Na <sub>2</sub> CO <sub>3</sub> . <b>x</b> H <sub>2</sub> O.
		$M_r$ of Na <sub>2</sub> CO <sub>3</sub> . <b>x</b> H <sub>2</sub> O =[1]
	(v)	Calculate the value of ${\bf x}$ in Na <sub>2</sub> CO <sub>3</sub> . ${\bf x}$ H <sub>2</sub> O. Give your answer to the nearest whole number
		<b>x</b> = [1]
(d)		student suggested using 0.110 mol dm <sup>-3</sup> sulfuric acid in place of the 0.110 mol dm <sup>-3</sup> drochloric acid used in the experiment above. The mass of <b>FA 1</b> used was unchanged.
	Exp	plain what effect this change would have on the accuracy of the experiment.
		[2]
		[Total: 15]

2 In Question 1 you used a titration method to investigate a hydrated compound. In Question 2 you will use a method involving measuring masses. You will find the identity of a Group 2 element, Y, whose hydrated sulfate has the formula YSO<sub>4</sub>.7H<sub>2</sub>O.

When heated, the hydrated sulfate loses its water of crystallisation to form anhydrous sulfate. The anhydrous sulfate does not decompose at the temperature of the Bunsen flame.

$$YSO_4.7H_2O(s) \rightarrow YSO_4(s) + 7H_2O(g)$$

**FA 4** is the hydrated sulfate of **Y**, **Y**SO<sub>4</sub>.7H<sub>2</sub>O.

#### (a) Method

- Weigh the crucible with its lid and record the mass.
- Tip between 1.80g and 2.00g of FA 4 into the crucible. Keep the remaining FA 4 for Question 3.
- Weigh and record the mass of crucible, lid and FA 4.
- Place the crucible on the pipe-clay triangle on the tripod. Put the lid on the crucible and heat gently for about 1 minute.
- Use tongs to remove the lid and heat the crucible strongly for about 4 minutes. Replace the lid and then leave to cool.
- While the crucible is cooling, begin work on **Question 3**.
- When cool, reweigh the crucible with its lid and contents and record the mass.
- Calculate and record the mass of FA 4 before heating, the mass of residue after heating and the mass of water lost.

[4]

(i) Calculate the number of moles of water lost on heating FA 4.

	(ii)	moles of $H_2O$ lost = mol [1] Deduce the number of moles of anhydrous $\mathbf{Y}SO_4$ that are formed when this water is lost.
	(iii)	$ \mbox{moles of $\bf YSO_4$ =} \mbox{mol} \  \   \mbox{[1]} $ Use your answer to (ii) and the mass of residue left after heating \$\bf FA 4\$ to determine the relative atomic mass, \$A_r\$, of \$\bf Y\$.
(	(iv)	$A_{r}$ of $\mathbf{Y}$ =
		<b>Y</b> is [1]
(c)	Wh	tudent did not heat the sample of <b>FA 4</b> for long enough to remove all the water.  nat would be the effect of this on the calculated value of the relative atomic mass of <b>Y</b> ?  plain your answer.
		[2]

[Total: 11]

#### **Qualitative Analysis**

Where reagents are selected for use in a test, the **name** or **correct formula** of the element or compound must be given.

At each stage of any test you are to record details of the following:

- colour changes seen;
- the formation of any precipitate and its solubility in an excess of the reagent added;
- the formation of any gas and its identification by a suitable test.

You should indicate clearly at what stage in a test a change occurs.

If any solution is warmed, a **boiling tube** must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests for ions present should be attempted.

3 (a) In Question 2 you used a gravimetric method to identify the cation, Y, present in FA 4. You will now use a qualitative analysis method to confirm whether your identification of Y was correct.

Transfer a spatula measure of **FA 4** into a boiling tube. Add a 5 cm depth of distilled water and shake the tube to dissolve the solid.

(i) Use 1 cm depths of this solution in test-tubes to carry out tests to identify the cation, Y, present in FA 4. Record your tests and observations in a suitable form in the space below.

	(ii)	Do your qualitative analysis tests in (i) confirm your identity of Y in Question 2? Explain your answer.
		[1]
(b)	FA	5 contains two of the ions listed in the Qualitative Analysis Notes.
	(i)	Place a small spatula measure of <b>FA 5</b> into a hard-glass test-tube and heat, gently at first and then strongly. Record your observations.
		observations
		[2]

(ii) Transfer the remaining **FA 5** into the 100 cm³ beaker. Add approximately 20 cm³ of distilled water and stir to form a solution.

For each of the tests below use a separate 1cm depth of this solution in a test-tube. Record your observations.

test	observations
Add aqueous sodium hydroxide.	
Add a few drops of acidified potassium manganate(VII), then	
add a few drops of ammonium thiocyanate. Tip the contents of the tube down the sink and rinse the tube and sink with tap water.	
Add a 1 cm depth of hydrogen peroxide, then	
add aqueous sodium hydroxide.	
Add a 1 cm depth of dilute nitric acid and then a few drops of aqueous silver nitrate.	
Add a few drops of aqueous barium nitrate or aqueous barium chloride, then	
add dilute hydrochloric acid.	
	[6]
(iii) Identify the ions present in FA 5.	
ions present	and [1]

(iv) What type of reaction is occurring when FA 5 reacts with acidified potassium

manganate(VII)?

# **Qualitative Analysis Notes**

## 1 Reactions of aqueous cations

ion	reaction with		
ion	NaOH(aq)	NH <sub>3</sub> (aq)	
aluminium, Al³+(aq)	white ppt. soluble in excess	white ppt. insoluble in excess	
ammonium, NH₄⁺(aq)	no ppt. ammonia produced on heating	_	
barium, Ba²+(aq)	faint white ppt. is nearly always observed unless reagents are pure	no ppt.	
calcium, Ca²+(aq)	white ppt. with high [Ca <sup>2+</sup> (aq)]	no ppt.	
chromium(III), Cr³+(aq)	grey-green ppt. soluble in excess	grey-green ppt. insoluble in excess	
copper(II), Cu <sup>2+</sup> (aq)	pale blue ppt. insoluble in excess	blue ppt. soluble in excess giving dark blue solution	
iron(II), Fe <sup>2+</sup> (aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess	
iron(III), Fe³+(aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess	
magnesium, Mg²+(aq)	white ppt. insoluble in excess	white ppt. insoluble in excess	
manganese(II), Mn²+(aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess	
zinc, Zn <sup>2+</sup> (aq)	white ppt. soluble in excess	white ppt. soluble in excess	

### 2 Reactions of anions

ion	reaction
carbonate, CO <sub>3</sub> <sup>2-</sup>	CO <sub>2</sub> liberated by dilute acids
chloride, C <i>l</i> <sup>-</sup> (aq)	gives white ppt. with Ag <sup>+</sup> (aq) (soluble in NH <sub>3</sub> (aq))
bromide, Br <sup>-</sup> (aq)	gives cream ppt. with Ag <sup>+</sup> (aq) (partially soluble in NH <sub>3</sub> (aq))
iodide, I-(aq)	gives yellow ppt. with Ag <sup>+</sup> (aq) (insoluble in NH <sub>3</sub> (aq))
nitrate, NO <sub>3</sub> <sup>-</sup> (aq)	NH <sub>3</sub> liberated on heating with OH <sup>-</sup> (aq) and A <i>l</i> foil
nitrite, NO <sub>2</sub> -(aq)	NH <sub>3</sub> liberated on heating with OH <sup>-</sup> (aq) and A <i>l</i> foil
sulfate, SO <sub>4</sub> <sup>2-</sup> (aq)	gives white ppt. with Ba <sup>2+</sup> (aq) (insoluble in excess dilute strong acids)
sulfite, SO <sub>3</sub> <sup>2-</sup> (aq)	gives white ppt. with Ba <sup>2+</sup> (aq) (soluble in excess dilute strong acids)

# 3 Tests for gases

gas	test and test result
ammonia, NH <sub>3</sub>	turns damp red litmus paper blue
carbon dioxide, CO <sub>2</sub>	gives a white ppt. with limewater (ppt. dissolves with excess CO <sub>2</sub> )
chlorine, Cl <sub>2</sub>	bleaches damp litmus paper
hydrogen, H <sub>2</sub>	'pops' with a lighted splint
oxygen, O <sub>2</sub>	relights a glowing splint
