MATHEMATICS 9709/51

Paper 5 Probability & Statistics 1

October/November 2023

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

BLANK PAGE

The times taken by 120 children to complete a particular puzzle are represented in the cumulative frequency graph.

(a)	Use the graph to estimate the interquartile range of the data.	[2]
		••••
		••••
35%	of the children took longer than T seconds to complete the puzzle.	
(b)	Use the graph to estimate the value of T .	[2]

	teem repeatedly throws two ordinary fair 6-sided dice at the same time. On each occasion, the re is the sum of the two numbers that she obtains.
(a)	Find the probability that it takes exactly 5 throws of the two dice for Hazeem to obtain a score of 8 or more. [2]
(b)	Find the probability that it takes no more than 4 throws of the two dice for Hazeem to obtain a score of 8 or more. [2]

A red spinner has four sides labelled 1, 2, 3, 4. When the spinner is spun, the score is the number on the side on which it lands. The random variable *X* denotes this score. The probability distribution table for *X* is given below.

х	1	2	3	4
P(X = x)	0.28	p	2p	3 <i>p</i>

(a)	Show that $p = 0.12$.	[1]
	ir blue spinner and a fair green spinner each have four sides labelled 1, 2, 3, blue and green) are spun at the same time.	4. All three spinners
(b)	Find the probability that the sum of the three scores is 4 or less.	[3]

In a restaurant, the tables are rectangular. Each table seats four people: two along each of the longer sides of the table (see diagram). Eight friends have booked two tables, X and Y. Rajid, Sue and Tan are three of these friends.

(a)	The eight friends will be divided into two groups of 4, one group for table X and one group for table Y .
	Find the number of ways in which this can be done if Rajid and Sue must sit at the same table as each other and Tan must sit at the other table. [3]
	en the friends arrive at the restaurant, Rajid and Sue now decide to sit at table X on the same side ach other. Tan decides that he does not mind at which table he sits.
(b)	Find the number of different seating arrangements for the 8 friends. [3]

As they leave the restaurant, the 8 friends stand in a line for a photograph.		
(c)	Find the number of different arrangements if Rajid and Sue stand next to each other, but neither is at an end of the line. [4]	

Additional Page

If you use the following lined page to complete the answer(s) to any question(s), the question number(s) must be clearly shown.
