Candidate surname		Other names
Pearson Edexcel Level 3 GCE	Centre Numbe	er Candidate Number
Wednesday	13 May	2020
Morning (Time: 2 hours)	Paper	Reference 8MA0/01
Mathematics		
Advanced Subsidiary Paper 1: Pure Mathei		
You must have: Mathematical Formulae and S	tatistical Tables (C	Green), calculator

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided there may be more space than you need.
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 14 questions in this question paper. The total mark for this paper is 100.
- The marks for **each** question are shown in brackets – use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

1. A curve has equation

$$y = 2x^3 - 4x + 5$$

Find the equation of the tangent to the curve at the point P(2, 13).

Write your answer in the form y = mx + c, where *m* and *c* are integers to be found.

Solutions relying on calculator technology are not acceptable.

2.	[In this question the unit vectors \mathbf{i} and \mathbf{j} are due east and due north respectively.]	
	A coastguard station O monitors the movements of a small boat.	
	At 10:00 the boat is at the point $(4\mathbf{i} - 2\mathbf{j})$ km relative to O.	
	At 12:45 the boat is at the point $(-3\mathbf{i} - 5\mathbf{j})$ km relative to <i>O</i> .	
	The motion of the boat is modelled as that of a particle moving in a straight line at constant speed.	
	(a) Calculate the bearing on which the boat is moving, giving your answer in degrees to one decimal place.	
		(3)
	(b) Calculate the speed of the boat, giving your answer in $\mathrm{km}\mathrm{h}^{-1}$	(3)

6. (a) Find the first 4 terms, in ascending powers of x, in the binomial expansion of

 $(1 + kx)^{10}$

where k is a non-zero constant. Write each coefficient as simply as possible.

Given that in the expansion of $(1 + kx)^{10}$ the coefficient x^3 is 3 times the coefficient of x,

(b) find the possible values of *k*.

8. The temperature, θ °C, of a cup of tea *t* minutes after it was placed on a table in a room, is modelled by the equation

$$\theta = 18 + 65e^{-\frac{t}{8}} \qquad t \ge 0$$

Find, according to the model,

- (a) the temperature of the cup of tea when it was placed on the table,
- (b) the value of t, to one decimal place, when the temperature of the cup of tea was $35 \,^{\circ}$ C.
- (c) Explain why, according to this model, the temperature of the cup of tea could not fall to 15 °C.

Figure 2

The temperature, μ °C, of a second cup of tea *t* minutes after it was placed on a table in a different room, is modelled by the equation

$$\mu = A + Be^{-\frac{t}{8}} \qquad t \ge 0$$

where A and B are constants.

Figure 2 shows a sketch of μ against t with two data points that lie on the curve.

The line *l*, also shown on Figure 2, is the asymptote to the curve.

Using the equation of this model and the information given in Figure 2

(d) find an equation for the asymptote l.

Figure 3 shows part of the curve with equation $y = 3\cos x^{\circ}$.

The point P(c, d) is a minimum point on the curve with c being the smallest negative value of x at which a minimum occurs.

- (a) State the value of c and the value of d.
- (b) State the coordinates of the point to which *P* is mapped by the transformation which transforms the curve with equation $y = 3\cos x^{\circ}$ to the curve with equation

(i)
$$y = 3\cos\left(\frac{x^{\circ}}{4}\right)$$

(ii)
$$y = 3\cos(x - 36)^{\circ}$$

(c) Solve, for $450^{\circ} \leq \theta < 720^{\circ}$,

 $3\cos\theta = 8\tan\theta$

giving your solution to one decimal place.

In part (c) you must show all stages of your working.

Solutions relying entirely on calculator technology are not acceptable.

**11.** (i) A circle  $C_1$  has equation

$$x^2 + y^2 + 18x - 2y + 30 = 0$$

The line *l* is the tangent to  $C_1$  at the point P(-5, 7).

Find an equation of *l* in the form ax + by + c = 0, where *a*, *b* and *c* are integers to be found.

(ii) A different circle  $C_2$  has equation

 $x^2 + y^2 - 8x + 12y + k = 0$ 

where k is a constant.

Given that  $C_2$  lies entirely in the 4th quadrant, find the range of possible values for k.
