Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer all questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided there may be more space than you need.
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. If a calculator is used instead of the tables, the value should be given to an equivalent degree of accuracy.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 6 questions in this question paper. The total mark for this paper is 75.
- The marks for each question are shown in brackets

 use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

•	A spinner can land on the numbers 10, 12, 14 and 16 only and the probability of the spinner landing on each number is the same. The random variable X represents the number that the spinner lands on when it is spun once.	Leave blank
	(a) State the name of the probability distribution of <i>X</i> .	
	(1)	
	(b) (i) Write down the value of $F(V)$	
	(b) (i) Write down the value of $E(X)$ (1)	
	(ii) Find $Var(X)$	
	(1) 1 md (a) (2)	
	A second spinner can land on the numbers 1, 2, 3, 4 and 5 only. The random variable Y represents the number that this spinner lands on when it is spun once. The probability distribution of Y is given in the table below	
	y 1 2 3 4 5	
	$P(Y=y) \frac{4}{30} \frac{9}{30} \frac{6}{30} \frac{5}{30} \frac{6}{30}$	
	$P(Y=y)$ $\overline{30}$ $\overline{30}$ $\overline{30}$ $\overline{30}$ $\overline{30}$ $\overline{30}$ $\overline{30}$	
	(c) Find (i) $E(Y)$	
	(2)	
	(ii) $Var(Y)$ (3)	
	The random variable $W = aX + b$, where <i>a</i> and <i>b</i> are constants and $a > 0$	
	Given that $E(W) = E(Y)$ and $Var(W) = Var(Y)$	
	(d) find the value of <i>a</i> and the value of <i>b</i> .	
	(5)	
	Each of the two spinners is spun once.	
	(e) Find $P(W = Y)$ (2)	
	(2)

Leave blank 5. A company director wants to introduce a performance-related pay structure for her managers. A random sample of 15 managers is taken and the annual salary, y in £1000, was recorded for each manager. The director then calculated a performance score, *x*, for each of these managers. The results are shown on the scatter diagram in Figure 1 on the next page. (a) Describe the correlation between performance score and annual salary. (1) The results are also summarised in the following statistics. $\sum x = 465$ $\sum y = 562$ $S_{xx} = 2492$ $\sum y^2 = 23140$ $\sum xy = 19428$ (b) (i) Show that $S_{xy} = 2006$ (1) (ii) Find S_{vv} (2) (c) Find the product moment correlation coefficient between performance score and annual salary. (2) The director believes that there is a linear relationship between performance score and annual salary. (d) State, giving a reason, whether or not these data are consistent with the director's belief. (1) (e) Calculate the equation of the regression line of y on x, in the form y = a + bxGive the value of *a* and the value of *b* to 3 significant figures. (4) (f) Give an interpretation of the value of b. (1) (g) Plot your regression line on the scatter diagram in Figure 1 (2) The director hears that one of the managers in the sample seems to be underperforming. (h) On the scatter diagram, circle the point that best identifies this manager. (1) The director decides to use this regression line for the new performance related pay structure. (i) Estimate, to 3 significant figures, the new salary of a manager with a performance score of 30 (2)

DO NOT WRITE IN THIS AREA

Leave blank

6. A disc of radius 1 cm is rolled onto a horizontal grid of rectangles so that the disc is equally likely to land anywhere on the grid. Each rectangle is 5 cm long and 3 cm wide. There are no gaps between the rectangles and the grid is sufficiently large so that no discs roll off the grid.

If the disc lands inside a rectangle without covering any part of the edges of the rectangle then a prize is won.

By considering the possible positions for the centre of the disc,

(a) show that the probability of winning a prize on any particular roll is $\frac{1}{5}$

A group of 15 students each roll the disc onto the grid twenty times and record the number of times, x, that each student wins a prize. Their results are summarised as follows

$$\sum x = 61 \qquad \sum x^2 = 295$$

(b) Find the standard deviation of the number of prizes won per student.

(2)

(7)

(3)

A second group of 12 students each roll the disc onto the grid twenty times and the mean number of prizes won per student is 3.5 with a standard deviation of 2

(c) Find the mean and standard deviation of the number of prizes won per student for the whole group of 27 students.

The 27 students also recorded the number of times that the disc covered a corner of a rectangle and estimated the probability to be 0.2216 (to 4 decimal places).

(d) Explain how this probability could be used to find an estimate for the value of π and state the value of your estimate.
