Mathematics

International Advanced Subsidiary/Advanced Level Decision Mathematics D1

You must have: Decision Mathematics Answer Book (enclosed), calculator

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- Write your answers for this paper in the Decision Mathematics answer book provided.
- Fill in the boxes at the top of the answer book with your name, centre number and candidate number.
- Do not return the question paper with the answer book.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided there may be more space than you need.
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- There are 7 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

Figure 1

Figure 1 shows a graph, T.

(a) Write down an example of a path from A to J on T.

(b) State, with a reason, whether A - B - C - D - E - G - F - H - J is an example of a tour on T.

The numbers on the 15 arcs in Figure 2 represent the distances, in km, between nine vertices, A, B, C, D, E, F, G, H and J, in a network.

- (c) Use Kruskal's algorithm to find the minimum spanning tree for the network. You should list the arcs in the order in which you consider them. In each case, state whether or not you are adding the arc to the minimum spanning tree.
- (3)
- (d) Draw the minimum spanning tree using the vertices given in Diagram 1 in the answer book.
- (1)

(1)

(Total 7 marks)

(e) State the weight of the minimum spanning tree.

Turn over 🕨

3

(1)

(1)

| Activity | Immediately preceding activities |
|----------|----------------------------------|
| А | _ |
| В | _ |
| С | _ |
| D | A, B, C |
| Е | A, B, C |
| F | С |
| G | F |
| Н | D |
| Ι | D, E, G |
| J | D, E |

Draw the activity network described in the precedence table above, using activity on arc and exactly 4 dummies.

(5)

(Total 5 marks)

3.

6.

Figure 5

Figure 5 models a network of roads. The number on each edge gives the length, in km, of the corresponding road. The vertices, A, B, C, D, E, F, G and H, represent eight towns. Bronwen needs to visit each town. She will start and finish at A and wishes to minimise the total distance travelled.

- (a) By applying Dijkstra's algorithm, starting at A, complete the table of least distances in the answer book.
- (b) Starting at A, use the nearest neighbour algorithm to find an upper bound for the length of Bronwen's route. Write down the route that gives this upper bound.

(2)

(6)

A reduced network is formed by deleting A and all arcs that are directly joined to A.

- (c) (i) Use Prim's algorithm, starting at C, to construct a minimum spanning tree for the reduced network. You must clearly state the order in which you select the arcs of your tree.
 - (ii) Hence, calculate a lower bound for the length of Bronwen's route.

(4)

(d) Using only the results from (b) and (c), write down the smallest interval that you can be confident contains the length of Bronwen's optimal route.

(2)

(Total 14 marks)

7. A company makes three types of storage container, small, medium and large.

The company owner knows that each week she should make

- at least 40 containers in total
- at least twice as many large containers as medium containers
- at most 60% small containers

Each small container requires 1 hour to make, each medium container requires 1.5 hours to make, and each large container requires 2.5 hours to make. The company has a total of 75 hours per week available to make all the containers.

Each small container costs $\pounds 9$ to make, each medium container costs $\pounds 12$ to make and each large container costs $\pounds 16$ to make.

The company owner wants to minimise her total cost.

- Let *x* represent the number of small containers made
- Let *y* represent the number of medium containers made
- Let z represent the number of large containers made
- (a) Formulate this information as a linear programming problem. State the objective and list the constraints as simplified inequalities with integer coefficients.

(7)

The company owner now decides to make exactly 45 containers.

(b) Explain why the minimum total cost is achieved when 7x + 4y is maximised.

(3)

The requirement to make exactly 45 containers reduces the constraints of the problem to the following:

$$x + 3y \le 45$$
$$0 \le x \le 27$$
$$3x + 2y \ge 75$$
$$y \ge 0$$

(c) Represent these constraints on Diagram 1 in the answer book. Hence determine, and label, the feasible region, R.

(4)

(d) Use the objective line method to find the optimal vertex, *V*, of the feasible region. You must make your objective line clear and label *V*.

(e) Write down the number of each type of container the company should make.

Calculate the corresponding total cost.

(2)

(2)

(Total 18 marks)
